

Leading by Experiment Mini Workshop

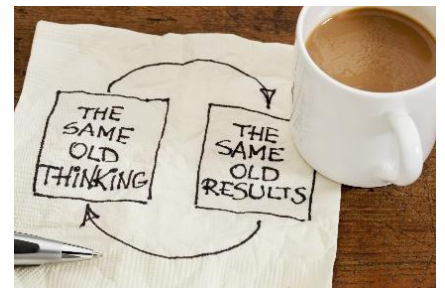

16th of June 2020

"Get rid of fire fighting and barriers to achieve your targets"

Leading by Experiment is a practical leadership approach of going step by step towards greater goals. It re-ignites belief of having influence over the changes and creates positive problem-solving culture. People (like you) in the organization are challenged to experiment in psychologically safe environment, which turns failing into learning. Our concept is designed to support you on your journey to become a real learning organization. We invite you to join an insightful discussion with our guests.
